Hi,

I have started a PyData group in Singapore six months ago. We had our inaugural meetup last night!

<https://twitter.com/pydatasg/status/555687868278906881>

PyData Meetups

We are **9692** members across **19** Meetups

PyData Meetups

We are **9692** members across **19** Meetups

PyData brings together both users and developers of data analysis tools to share ideas and learn from each other. The PyData community gathers to discuss how best to apply Python tools, as well as tools using R and Julia, to meet evolving challenges in data management, processing, analytics, and visualization.

PyData is organized by, and all proceeds benefit, NumFOCUS, a 501(c)(3) public charity. Proceeds are used for the continued development of open-source tools used by data scientists and the advancement of the NumFOCUS mission. www.numfocus.org

I am wondering if there is an interest to have "Pair Data Science". The idea is to pair up a beginner with an experienced data scientist/engineer, have both of them work on an interesting project, preferably for a month, and then share with us the project in a form of a lightning talk.

The beginner can program based on his/her partner's guidance, or observe how it is being done, or it can be a collaborative work. The progress of the project should be documented in a form of blog posts, so that others can learn too.

It might work better if both of them work or live nearby, although it should work from remote too.

I stole the idea from "Data Science Professional Development San Francisco" which I like it a lot.

Thoughts? Anyone interested to be a mentor, or to learn from a mentor?

You, Prashanth Manohar, Alyssa Quek and 26 others
